aquiess™ delivers a successful Spring'09 rainfall result giving welcomed boost to both crops and morale across Australia's South East

October '09

EXCERPT FROM ABC Stateline¹⁰Program (2/10/09):
PHIL HALL: It's probably the best season we've had since '96, so that's 13 years ago. So, yeah, no, things are going very nicely.

JAMES BENNETT: His 2,000 hectare property had only 28 millimeters of rain during September last year. This time

a time when that sort of rain would not have been remarkable, but after years of drought it came as a surprise to many, with most climate models predicting Victoria's chances of even average winter and spring rainfall were looking slim.

aquiess has completed the 60 day project for the client who has recorded an average of 70mm (2.77inches) across all targets within three States of SE

around, more than three times that has fallen. Elsewhere, Horsham had 65 mm, more than double last year's tally, and further north, Swan Hill, which had only eight mls last September received more than 40. There was

Australia. This project was concluded on 16th October '09. Further details of the Spring'09 project results along with Bureau Of Meteorology Data is available upon email request to info@aquiss.com

No relationship between the Bureau Of Meteorology and **aquiess** exists or is implied as existing, by the use of the Bureau's charts. See details at URL: <http://www.aquiss.com/legals.html>

Services deployed by **aquiess** utilize the best available surface, airborne and satellite data resources, as well as depending on valuable risk-management consulting at the client's target end of each project. Programs are built and launched in a 30 to 90 day timeframe for clients and on behalf of communities which require Oceanic Rainfall Acquisition (ORA).
